## Stock Correction Transactions

*What's  
NEW*

**ATMIT** has introduced dedicated stock correction transactions, enabling users to accurately **correct the impact of incorrect data entry** across all inventory-related transactions.

The deviation between the transactions recorded on **ATMIT** and the physical on-ground execution of the transaction can be solved via this **standalone correction transaction**.

The net quantity impact of this transaction is **zero** since it will add quantity to the items wrongly issued from **ATMIT** and will deduct the same quantity from the item that was actually issued on-ground.

### Why This Matters

- Eliminates stock inaccuracies without manual adjustments
- Keeps inventory records clean and auditable
- Saves time when correcting production or warehouse mistakes
- Improves stock valuation and reporting accuracy
- Reduces operational confusion across departments

## 2

# Enhanced Social Security (NSSF) Employee Reports

### What's NEW

ATMIT now offers **enhanced employee-based Social Security reports**, including NSSF for Lebanon, with more detailed and flexible reporting options.

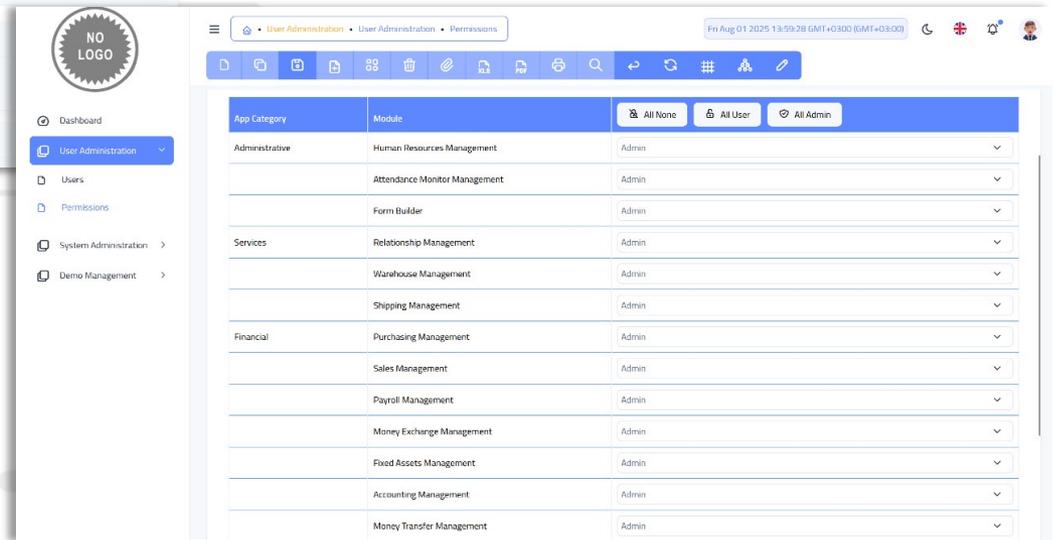

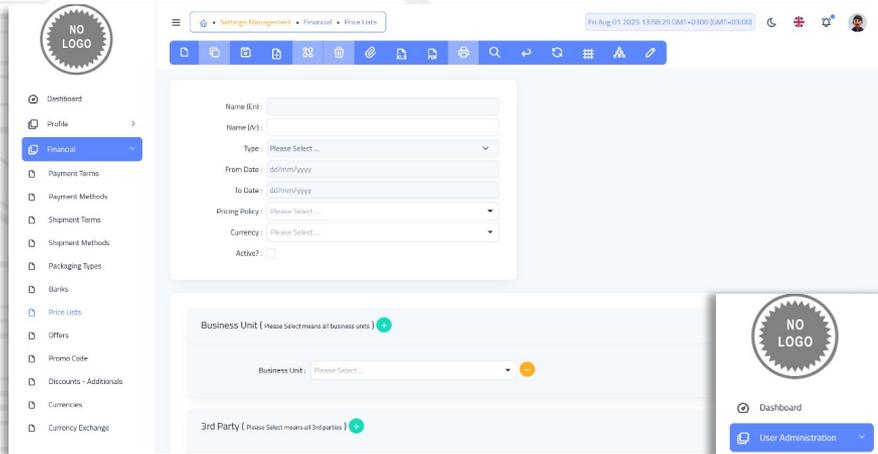

Instead of viewing Social Security contributions by employee groups, you can now review each employee individually, with contributions displayed by date and period. The system also allows you to generate total Social Security contributions per employee for any selected timeframe, along with expanded filtering and reporting options.

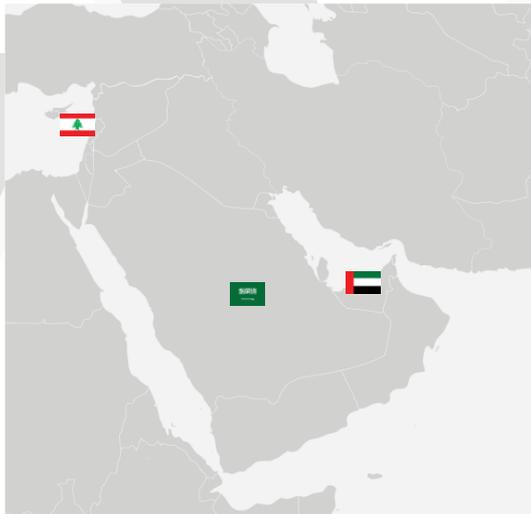

### Why This Matters

- Improves **clarity and transparency** of Social Security contributions
- Simplifies compliance and audit preparation
- Saves time when generating official NSSF reports
- Enhances payroll accuracy and reporting confidence
